

Description

Symbiogen is a superconcentrated bacterial culture, containing enzymes, of a single, spore-forming organism preserved to produce a stable product. The organism in Symbiogen naturally enters into symbiosis with plant roots. Inoculation with Symbiogen has benefited plants as diverse as dogwood, corn, lilies, and soybeans.

Typical Properties

Color	Brown
Clarity	Turbid
Plate count	At least 9×10^8 CFU/mL
Shelf life	At least one year in unopened container
pH	9.2
Flash point	None
Specific gravity	1.01
Odor	Mild typical

Standard Packaging

55- & 30-gallon drums
5-gallon pails
